

PROJECT

Publishing Amazon SNS Messages Privately

```
! Project3-Cf-tmp-newyaml X
C:\Users\> MUHAMMED JASEEM KP > Desktop > INTELLIPAT COURSE > ! Project3-Cf-tmp-newyaml
1  AWSTemplateFormatVersion: 2010-09-09
2  Description: CloudFormation Template for SNS VPC Endpoints
3  Parameters:
4    KeyName:
5      Description: Name of an existing EC2 KeyPair to enable SSH access to the instance
6      Type: 'AWS::EC2::KeyPair::KeyName'
7      ConstraintDescription: must be the name of an existing EC2 KeyPair.
8  SSHLocation:
9    Description: The IP address range that can be used to SSH to the EC2 instance
10   Type: String
11   MinLength: '9'
12   MaxLength: '18'
13   Default: 0.0.0.0/0
14   AllowedPattern: '(\d{1,3})\.(\d{1,3})\.(\d{1,3})\.(\d{1,3})/(\d{1,2})'
15   ConstraintDescription: must be a valid IP CIDR range of the form x.x.x.x/x.
16  Mappings:
17    RegionMap:
18      us-east-1:
19        AMI: ami-0c293f3f676ec4f90
20      us-east-2:

Configure stack options Step 4 Review and create

Project-3-Stack Stack name must be 1 to 128 characters, start with a letter, and only contain alphanumeric characters. Character count: 15/128.

Parameters Parameters are defined in your template and allow you to input custom values when you create or update a stack.

KeyName Name of an existing EC2 KeyPair to enable SSH access to the instance Jaseem-ID1

SSHLocation The IP address range that can be used to SSH to the EC2 instance 0.0.0.0/0

Info Tutorials

Learn how to implement common use cases in AWS Lambda.

Create a simple web app

In this tutorial you will learn how to:

- Build a simple web app, consisting of a Lambda function with a function URL that outputs a webpage
- Invoke your function through its function URL

EC2 EFS IAM CloudWatch S3 Lambda RDS DynamoDB VPC Elastic Beanstalk

Create endpoint

Info

There are three types of VPC endpoints – Interface endpoints, Gateway Load Balancer endpoints, and Gateway endpoints. Interface endpoints and Gateway Load Balancer endpoints are powered by AWS PrivateLink, and use an Elastic Network Interface (ENI) as an entry point for traffic destined to the service. Interface endpoints are typically accessed using the public or private DNS name associated with the service, while Gateway endpoints and Gateway Load Balancer endpoints serve as a target for a route in your route table for traffic destined for the service.

Endpoint settings

Name tag - optional

Creates a tag with a key of 'Name' and a value that you specify.

Project3-EP

Service category

Select the service category
